

Effects of climate change on ecosystem services in the Northern Rockies Region [Chapter 11]

www.nrfirescience.org/resource/17534

In this chapter, we focus on the ecosystem services provided to people who visit, live adjacent to, or otherwise benefit from natural resources on public lands. Communities in the Forest Service, U.S. Department of Agriculture (USFS) Northern Region and the Greater Yellowstone Area (GYA), hereafter called the Northern Rockies region...

Ecological implications of climate change in Yellowstone: moving into uncharted territory?

www.nrfirescience.org/resource/13548

Climate science and understanding how climate change may affect the Greater Yellowstone Ecosystem (GYE) have come a long way since our 1992 Yellowstone Science article (Romme and Turner 1992, based on Romme and Turner 1991). In 1992, the potential for global warming driven by anthropogenic emissions of...

Aspen response to drought and climate change in the 21st century

www.nrfirescience.org/resource/13663

Recent elevated dieback of aspen after severe droughts in the 2000s has prompted concern about the future of aspen in a changing climate. I will give an overview of what we know and don't know about drought stress on aspen physiology and mortality, and what this means for the future of aspen forests in a changing climate.

Webinar

Using state and transition simulation models to guide sustainable management of ecosystems: three case studies from across the US

www.nrfirescience.org/resource/14867

This webinar was conducted as a part of the Climate Change Science and Management Webinar Series, put on by the USGS National Climate Change and Wildlife Science Center and the FWS National Conservation Training Center. Sustainable management of natural resources under competing demands is challenging, particularly when facing novel...

Webinar

Understanding fire refugia and their importance to conservation in the Rocky Mountains of the U.S. and Canada

www.nrfirescience.org/resource/13045

Understanding fire refugia and its interactions with other stressors, poses extreme challenges to biodiversity conservation. An important and potentially efficient adaptation strategy will be the identification and protection of natural refugia that buffer biodiversity from the rate and magnitude of regional change. The most...

Webinar

A customized model to predict climate-fire-vegetation dynamics for the Greater Yellowstone Ecosystem

www.nrfirescience.org/resource/15161

This presentation was part of the 13th Biennial Scientific Conference on the Greater Yellowstone Ecosystem held at Jackson Lake Lodge in Grand Teton National Park, October 4-6, 2016. The conference theme was Building on the Past, Leading into the Future: Sustaining the Greater Yellowstone Ecosystem in the Coming Century.

Webinar

Fire, forests, and climate

www.nrfirescience.org/resource/13828

Penny Morgan with University of Idaho Department of Forest, Rangeland and Fire Sciences will present how changing climate is affecting fire and forests. Dr. Morgan, an expert on fire ecology, will highlight changing climate in the US northern Rockies and implications for forest fire extent and severity. Drawing on recent research...

Webinar

Climate, wildfire, and erosion ensemble foretells more sediment in western USA watersheds

www.nrfirescience.org/resource/14573

The area burned by wildfires has increased in recent decades and is expected to increase in the future for many watersheds worldwide due to climate change. Burned areas within watersheds increase soil erosion rates, which can increase the downstream accumulation of sediment in rivers and reservoirs. Using an ensemble of climate,...

Webinar

A framework for evaluating the vulnerability of multiple wildlife species to climate change at regional scales

www.nrfirescience.org/resource/14862

This webinar was conducted as part of the Climate Change Science and Management Webinar series, hosted in partnership by the USGS National Climate Change and Wildlife Science Center and the FWS National Conservation Training Center. Frameworks for evaluating the vulnerability of multiple species to decline or extinction are...

Applying resilience thinking

www.nrfirescience.org/resource/13406

Based on the recently published "Principles for Building Resilience: Sustaining Ecosystem Services in Social-Ecological Systems", this video presents an insightful overview of seven principles that could help you to apply ideas from resilience thinking into your practices.

Video

Simulating vegetation, fire, and climate dynamics in a Northern Rocky Mountain landscape

www.nrfirescience.org/resource/12873

Robert Keane presents a webinar on the results of research using models to assess potential interacting effects of climate changes, pathogens, and wildfire on the distribution and density of whitebark pine in a high-elevation watershed in Glacier National Park, Montana, USA. Climate changes are projected to profoundly influence...

Webinar

Vulnerability of tree species and biome types to climate change in the U.S. Northern Rocky Mountains and Yellowstone

www.nrfirescience.org/resource/13043

This presentation assesses components of vulnerability of tree species and biome types to projected future climate within the Great Northern Landscape Conservation Cooperative (GNLCC) in the US Northern Rockies and the ecosystems surrounding Glacier and Yellowstone/Grand Teton National Parks. We drew on the results of five published...

Webinar

Interdisciplinary applications of global terrestrial carbon cycle models

www.nrfirescience.org/resource/13772

Terrestrial carbon cycle models, or dynamic global vegetation models (DGVMs), have long been used to estimate biogeochemical and biophysical feedbacks to climate. At their core, DGVMs represent vegetation and landscape dynamics using process-based representations of photosynthesis, carbon allocation, stand...

Webinar

Forests for the future: a shared agenda

www.nrfirescience.org/resource/14123

Climate change is no longer a threat; it's a reality. A rapidly changing climate is already transforming ecosystems and the processes that sustain them; greater changes lie in front of us. Climate change will change physical relationships (e.g. the baseflow in streams from a given amount of rainfall). Climate change will change...

Webinar

Smoke consequences of new wildfire regimes driven by climate change

www.nrfirescience.org/resource/12838

Smoke from wildfires has adverse biological and social consequences, and various lines of evidence suggest that smoke from wildfires in the future may be more intense and widespread, demanding that methods be developed to address its effects on people, ecosystems, and the atmosphere. Don McKenzie presented webinar on March 19, 2014...

Webinar

A Three-Step Decision Support Framework for Taking Climate Adaptation Actions

www.nrfirescience.org/resource/15933

We will present a framework for using available climate science to set forward-looking conservation goals and select among a menu of climate adaptation strategies. This decision support framework is designed to catalyze adaptation actions by bridging recent advances in climate science and adaptation planning, while also helping...

Webinar

Climate change and fire projections in the West: why the science should matter to managers

www.nrfirescience.org/resource/13034

This webinar examines the relationship between climate and pre-settlement fire patterns, using fire history to gain insight into future fire projections. The main topics discussed include the nature of recent variability in areas burned by fire, how vegetation and fuels affect the relationship between climate and area burned,...

Regional socio-economic vulnerability assessment

www.nrfirescience.org/resource/13761

Understanding differences in social vulnerability across a region can help public land management agencies assess potential tradeoffs associated with managing natural resources in the face of climate change. Regional social vulnerability assessments can also inform the development of policies and programs that aim to assist...
