

### **Ecological impacts of fire trails on plant assemblages in edge habitat adjacent to trails**

[www.nrfirescience.org/resource/16333](http://www.nrfirescience.org/resource/16333)

Fire trails provide access into vegetation for controlled burns in fire-prone regions of the world. We examined the ecological impacts of fire trails on plant assemblages in edge habitat adjacent to trails in eucalypt woodlands of World Heritage Blue Mountains National Park, southeastern Australia. We found that understory plant...

### **Effects of wildfire on the value of recreation in western North America**

[www.nrfirescience.org/resource/15023](http://www.nrfirescience.org/resource/15023)

Wildfires play an integral role in forest ecosystems of western North America. In an attempt to measure the level and value of ecosystem damage caused by wildfires, papers employing nonmarket valuation techniques-stated preference, revealed preference, and combined methods-are reviewed. A systematic review of results shows a portion...

### **Effects of wildfire on national park visitation and the regional economy: a natural experiment in the Northern Rockies**

[www.nrfirescience.org/resource/12040](http://www.nrfirescience.org/resource/12040)

Federal wildland fire management policy in the United States directs the use of value-based methods to guide priorities. However, the economic literature on the effect of wildland fire on nonmarket uses, such as recreation, is limited. This paper introduces a new approach to measuring the effect of wildfire on recreational use by...

### **Wildland Fire and Organic Discourse: Negotiating Place and Leisure Identity in a Changing Wildland Urban Interface**

[www.nrfirescience.org/resource/17484](http://www.nrfirescience.org/resource/17484)

A lack of research on the conceptual intersection of leisure, place and wildland fire and its role in identity prompted this exploratory study. The purpose of this research was to gather evidence regarding how people negotiate identities under the threat of wildland fire. Qualitative interviews with 16 homeowners and recreationists...

### **Recreation visitor attitudes towards management-ignited prescribed fires in the Bob Marshall Wilderness Complex, Montana**

[www.nrfirescience.org/resource/16051](http://www.nrfirescience.org/resource/16051)

Research at the Bob Marshall Wilderness Complex in Montana explored differences in recreation visitors' attitudes towards the use of management-ignited prescribed fires in the wilderness. A mail-

back survey of visitors (n = 291) during the 2004 season revealed that over half of visitors would accept prescribed fires in wilderness...

### **The Effects of Fire on Recreation Demand in Montana**

[www.nrfirescience.org/resource/17485](http://www.nrfirescience.org/resource/17485)

Wildfire and prescribed fire have the potential to affect user demand and value for recreation, making such information important to the decision-making process for fire managers. However, such information is not always readily available. We conducted surveys on 22 sites within four national forests in western Montana to determine...

### **The effects of fire on hiking demand: a travel cost study of Colorado and Montana**

[www.nrfirescience.org/resource/10968](http://www.nrfirescience.org/resource/10968)

Surveys were conducted on 33 sites within National Forests in Colorado and Montana to test how forest fires affected recreation demand in the two states. Data were collected on the actual number of visits and on the intended number of visits if the area had been subject to a recent high intensity crown fire, a recent prescribed fire...

### **The dynamic path of recreational values following a forest fire: a comparative analysis of states in the Intermountain West**

[www.nrfirescience.org/resource/7924](http://www.nrfirescience.org/resource/7924)

This analysis examines the dynamic path of recreational values following a forest fire in three different states in the intermountain western United States. The travel cost demand analysis found that annual recreation values after a fire follow a highly nonlinear intertemporal path. The path is S-shaped, providing a range of...

### **Testing transferability of forest recreation demand in three intermountain states with application to forest fire effects**

[www.nrfirescience.org/resource/11052](http://www.nrfirescience.org/resource/11052)

Surveys of visitors to National Forests in Colorado, Idaho, and Wyoming were conducted to determine whether non-motorized recreation visitation responded to different fire ages and fire intensities. Actual and intended behavior data was combined using a negative binomial count data travel cost model. The intended behavior trip...

### **Effects of fire on the economic value of forest recreation in the Intermountain West: preliminary results**

[www.nrfirescience.org/resource/11051](http://www.nrfirescience.org/resource/11051)

Visitors to National Forests in Colorado, Idaho, and Wyoming were asked how their visitation rates would change with the presence of a high-intensity crown fire, prescribed fire, and a 20-year-old high-intensity fire at the area they were visiting. By using pairwise t-tests, visitors to forests in Colorado showed a statistically...

### **Restoring recreational and residential forests**

[www.nrfirescience.org/resource/11249](http://www.nrfirescience.org/resource/11249)

Several decades of fire suppression following logging around the turn-of-the-century has produced dense, even-age stands of ponderosa pine (*Pinus ponderosa*) and Douglas-fir (*Pseudotsuga menziesii*). They contrast with the original forests where frequent, low-intensity fires gave rise to open, parklike, and often uneven-age stands of...

### **Effects of the Gates Park Fire on recreation choices**

[www.nrfirescience.org/resource/11094](http://www.nrfirescience.org/resource/11094)

The 1988 Gates Park Fire, along the North Fork of the Sun River in the Bob Marshall Wilderness, provided an opportunity to explore fire effects on wilderness visitor choices. Recreation visitors along the North and South Fork drainages were interviewed to assess the effects of 1988 fires on their 1989 visits. The Gates Park fire had...

### **Changes in recreation values after fire in the Northern Rocky Mountains**

[www.nrfirescience.org/resource/11111](http://www.nrfirescience.org/resource/11111)

Changes in recreation values after wildfire in the northern Rocky Mountains were determined by estimating the difference in the present net value of recreation activity with and without fire. To estimate the value of recreation activity at burned and unburned sites, a contingent market valuation approach was used. Hypothetical...

### **Methods for assessing the impact of fire on forest recreation**

[www.nrfirescience.org/resource/17486](http://www.nrfirescience.org/resource/17486)

Methods for assessing the impact of fire on forest recreation were studied in a literature search and an

experiment. Contingent market valuation appeared the most promising. This direct, economic approach uses personal interviews and sets up a hypothetical market transaction in which values are estimated. In an illustrative...
