

Developing an online tool for identifying at-risk populations to wildfire smoke hazards

www.nrfirescience.org/resource/17263

Wildfire episodes pose a significant public health threat in the United States. Adverse health impacts associated with wildfires occur near the burn area as well as in places far downwind due to wildfire smoke exposures. Health effects associated with exposure to particulate matter arising from wildfires can range from mild eye and...

Air quality impacts from prescribed fire and wildfire: How do they compare?

www.nrfirescience.org/resource/17799

Prescribed fires are regulated by states and are always subject to strict air-quality standards. Their use must be planned carefully to keep the smoke they produce at acceptable levels. Managers can predict the direction of smoke plumes by relying on meteorological reports and using computer models.

Managers avoid smoke-sensitive...

Smoke management: preparing and informing the public

www.nrfirescience.org/resource/12859

For several months during 2011, wildfires throughout the Southwest Area and Mexico caused air quality impacts on public health across the region, with significant impacts measured hundreds of miles away from individual wildfires. In order to address the emerging issue, a concerted multi-state interagency air quality coordination...

Wildland fire smoke messaging and perception

www.nrfirescience.org/resource/14140

The NWCG Smoke Committee (SmoC) hosted this webinar on June 28, 2011. Four presentations and

a discussion period examined public perception and messaging about smoke and fire. The webinar was a key initial step in developing needed messaging about wildland fire smoke, and it also served as the Smoke Committee's beginning effort at...

Webinar

Predicting smoke impacts with uncertain emissions and meteorology

www.nrfirescience.org/resource/12840

Smoke from wildland fires can have adverse impacts on visibility and also on public health. Models are available for simulating the dispersion, long-range transport, and chemical evolution of fire plumes and predicting their impacts on air quality. However, these models are not perfect tools for decision making purposes. There are...
