Guidelines for restoration and rehabilitation of principal plant communities

www.nrfirescience.org/resource/11121

Range and wildland improvement projects conducted throughout the Intermountain region normally occur within specific plant communities. Each plant community has unique features that require different equipment, planting techniques, and plant materials to conduct improvement projects. Plant communities or associations discussed in...

Basic considerations for range and wildlife revegetation and restoration

www.nrfirescience.org/resource/11118

Plummer and others (1968) proposed 10 principles to follow when planning and implementing rangeland revegetation programs. These principles - or basic considerations for rangeland managers - are applicable to most sites in the Western United States (Jordan 1981; Merkel and Herbal 1973), and many projects in the Intermountain area...

Fire, competition, and forest pests: landscape treatment to sustain ecosystem function

www.nrfirescience.org/resource/10988

Fire, competition for light and water, and native forest pests have interacted for millennia in western forests to produce a countryside dominated by seral species of conifers. These conifer-dominated ecosystems exist in six kinds of biotic communities. We divided one of these communities, the Rocky Mountain Montane Conifer Forest,...

Use of the helitorch to enhance diversity on riparian corridors in mature pinyon-juniper communities: a conceptual approach

www.nrfirescience.org/resource/12109

As pinyon-juniper have increased their dominance throughout the Great Basin, other perennial plants have declined in abundance. Riparian areas traditionally have the greatest biodiversity found in the region. The increase of pinyon-juniper can generally be attributed to a change in the disturbance regime. To increase the plant...
